## CAULIFLOWER

<table>
<thead>
<tr>
<th><strong>Type</strong></th>
<th>A large headed hybrid cauliflower variety for production during winter.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Maturity</strong></td>
<td>Approximately 100-115 days from transplant to maturity.</td>
</tr>
<tr>
<td><strong>Plant Characteristics</strong></td>
<td>STAR 4405 has a large frame. A plant population of 28 000-35 000 per hectare is recommended for the crating market.</td>
</tr>
<tr>
<td><strong>Head Characteristics</strong></td>
<td>Well domed pure white curd with medium to large florets. Curd size ranges from 800-1500 grams.</td>
</tr>
<tr>
<td><strong>Features and Benefits</strong></td>
<td>Good cold tolerance.</td>
</tr>
</tbody>
</table>

### Fertilization Guidelines

- **N** - 200-240 kg/ha, 60-80 kg/ha incorporated preplant.
- Top dress the balance as follows: 7, 14, 21 and 28 days after transplant.
- **P** - Plant uptake is 50-60 kg/ha per season. Bring soil levels to 40 mg/kg and then incorporate 50-60 kg/ha preplant.
- **K** - The plant uses 250 kg potassium (K) per hectare per season. Bring soil levels to 130 mg/kg, then incorporate 125 kg/ha preplant and 125 kg/ha 28 days after transplant.
- **Boron (B) and Molybdenum (Mo)** - spray with 1 kg Solubor and 125g Sodium Molybdate, plus a wetting agent in 500 liters water per hectare 14 and 28 days after transplant.
